

Conference phones for every situation

Konftel 300M – the conference phone for the mobile office

The Konftel 300M is perfect for companies that have chosen a mobile communications solution. It is intended for use in mobile networks, with all their flexible benefits. You also get an uncompromising conference phone with smart functions and Konftel's patented audio technology OmniSound® 2.0, ensuring crystal-clear sound on all your conference calls.

The battery provides up to 30 hours of talk time and is charged when the Konftel 300M is placed on the accompanying charging cradle. Other useful features include the ability to record to an SD memory card, SMS and the Conference Guide that helps you save call groups, which is a huge help if you make regular multi-party calls.

The USB computer connection makes VoIP calls possible, while the Konftel 300M can also be used in environments with Unified Communication solutions.

The different connections, mobile and USB, can easily be switched and combined using Line Mode.

With the battery charged and the SIM card fitted, the Konftel 300M is excellent for anyone who needs to get large or small meetings going quickly!

Advantages of the Konftel 300M

ENVIRONMENT

Temperature: 5°-40°C.
Relative humidity: 20-80% condensation free.

CONTENTS

The Konftel 300M comes with a battery, Konftel charging cradle, USB cable, and quick reference guide.
Item no. 910101070.

OPTIONAL

900102113 Expansion microphones
900102084 Wall bracket
900102093 SD memory card 2 GB
900102095 Rechargeable battery
900102096 Battery charger
900102083 Soft travel case
900103384 Anti-theft protection, security lock cable

WARRANTY

Two years. The battery comes with a one-year guarantee.

Mobile meetings

The Konftel 300M is, to put it simply, a huge mobile phone with the same performance that you are used to from all Konftel's conference phones. The sound quality is optimal – a requirement for effective phone conferences.

SIM card and battery

The Konftel 300M is perfect for companies that have chosen a mobile communications solution. It is connected to the mobile network and has a battery that provides up to 30 hours of talk time and is charged when the Konftel 300M is placed on the accompanying charging cradle. The battery can be changed quite easily if you wish to add more batteries and a battery charger.

The mobile network and battery operation mean that you can start phone conferences with the Konftel 300M at once – wherever you are.

Recorder capability

The Konftel 300M supports recording to an SD memory card – perfect for interviews, documentation or simply as a reminder of important calls and meetings. Can also be used as a dictaphone.

Multi-party calls and conference guide

Your mobile operator's network determines the number of participants in multi-party calls, but normally up to six people can be connected. The conference guide, which stores call groups, rings all the parties simultaneously at the touch of a button. A useful function if you make regular calls.

USB connection for VoIP calls and UC environments

The Konftel 300M is compatible with most UC environments and can be connected to a computer using the accompanying USB cable. Use Line Mode to make it easy to switch between and combine mobile and USB connections.

Expansion microphones for larger meetings

Obviously, the Konftel 300M is equipped with Konftel's patented audio technology, OmniSound® 2.0, which gives crystal-clear sound. Supplement with expansion microphones for larger meetings to expand the reception area from 30 m² to more than double that.

OmniSound® 2.0 – sensational sound

Our patented audio technology, OmniSound®, is embedded into all Konftel phones to ensure crystal-clear voice transmission. OmniSound® 2.0 provides the Konftel 300M with the capability to deliver an even more impressive audio quality. Just like OmniSound® full duplex, OmniSound® 2.0 uses an omnidirectional microphone and three speakers for optimal audio performance. OmniSound® 2.0 is enhanced with innovative features – **noise suppression** minimises distracting background noise, **wideband voice** transmission gives 7 kHz during VoIP calls and an **equaliser** allows you to adjust sound levels during your meeting.
